PROFILE

Early-career data scientist and Computer Scientist, an HND graduate who builds end-to-end machine-learning applications across classification, retrieval-augmented generation, and API-backed web interfaces. Uses Python, SQL and scikit-learn to move from data preparation and evaluation to usable prototypes for education, planning and health-related use cases.

TECHNICAL SKILL HIGHLIGHTS

- **Programming & data:** Python, SQL, Pandas, NumPy, PostgreSQL, SQLite, Supabase, Excel, Power BI
- **Machine learning & NLP:** scikit-learn, gradient boosting, multi-label classification, model evaluation, FAISS, Hugging Face Transformers, Torchaudio
- **Applied AI & delivery:** RAG, LLM APIs, Fast-API, Streamlit, Plotly, Matplotlib, Seaborn, Git/GitHub, n8n

SELECTED MACHINE LEARNING PROJECTS | 2023 - PRESENT

ASK YCT - Admission Information Assistant | **LLMs, FAISS, RAG, Fast-API** | URL: admission-chatbot-web-app.vercel.app/

- Built and integrated a real-time Retrieval-Augmented Generation (RAG) system utilizing large language models, vector embeddings, and FAISS for semantic search over institutional knowledge bases, delivering accurate, hallucination-free admission guidance for prospective students.
- Deployed a full-stack web application enabling users to access instant support on programs, entry requirements, and application procedures.

Mentify - Multi-label Mental Health Screening Prototype | **Scikit-learn, Fast-API** | URL: mental-health-web-app-wine.vercel.app/

- Developed a multi-label classification pipeline for behavioral-assessment inputs and reported 98.27% exact-match ratio with 0.0037 Hamming loss.
- Built an interactive web application providing users with preliminary mental health assessments and personalized insights into their psychological wellness.

EduTrack - Student data-driven analytics | **scikit-learn, Fast-API** | URL: edutrack-analytics.vercel.app/

- Developed a multi-model analytics pipeline combining Logistic Regression classification and FP-growth association rule mining, achieving a 93.38% F1-score and 93.53% accuracy to uncover student performance trends and behavioral patterns.
- Implemented a Fast-API model-serving back-end to power automated predictions and data retrieval.

EXPERIENCE

Machine Learning Engineer (Volunteer) | [March, 2026] - Present

VibeCode Africa

- Engineered an automated email notification and scheduling pipeline integrated with Supabase to manage event registrations across multiple multi-location hackathons.
- Implemented automated database triggers and scheduling logic to deliver personalized registration confirmations and targeted event countdown reminders (7-day, 5-day, and day-of notices) to participants.

Intern | 2022 - 2023

Lagos State University Teaching Hospital, GRA-Ikeja, Lagos.

- Designed and implemented data-entry forms for a nurse database to improve the consistency of operational records.
- Configured and maintained CUG lines, supported server maintenance and resolved user and system issues across the hospital.

EDUCATION AND CERTIFICATIONS

- Graduate Member | **Computer Professionals of Nigeria (CPN) (2026)**
- Higher National Diploma (HND) | **Yaba College of Technology** | Computer Science (2024 - Mar 2026)
- Ordinary National Diploma (OND) | **Yaba College of Technology** | Computer Science (2019 - 2022)
- Selected Certifications: **Mathematics for Machine Learning: Linear Algebra** | *Imperial College London (Coursera)* | (2023); **Data Analysis with Python** | *Cognitive class (IBM Skills Network)* | (2022); **Python for Data Science** | *Cognitive class (IBM Skills Network)* | (2023); **Certificate in Programming with Python** | *NIIT (Fortesoft)* | (2022).
